

Wide 12 Crate Wall Guide

Standard arrangement:

- 21 connectors are provided for the standard arrangement
 - Each connector is made up of 1 socket, 1 bolt and 2 washers.
- Each crate is connected to its neighbouring crates using a connector through their slats. See image overside demonstrating use.
- There are 3 base bolts already in pre-drilled holes in the base. Unscrew these and fix the base crates in place.
- Stack & connect each crate mirroring the front / back arrangement of the base bolts (left & right crates bolted at the front and the middle crate at the back)
- Fix the side connecting bolts as you build to ensure stability. We recommend alternating front to back as you ascend each layer for maximum stability.

Use of the connector bolts
